

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.

Average Noise Per Day

Between 1/1/2008 12:00:00 am and 3/31/2008 11:59:59 PM (Local Time)

1st quarter 2008

Day Night Level (DNL): This is a 24-hour average noise level with a 10-decibel (dB) penalty for nighttime noise events between 10:00 p.m. and 7:00 a.m.

Time Above (TA): An expression for the amount of time noise exceeds a threshold level. The threshold level can be set at any point, for instance, 65 or 75 dBA. Generally time above is expressed in minutes per day that the threshold is exceeded.

Equivalent Noise Level (LEQ): Is a cumulative metric that averages noise levels over time – an hour, day, month or quarter.
