

## **1.01 OVERVIEW**

The Signage Standards Manual for Seattle-Tacoma International Airport (STIA) contains the standards for all airport signage and the regulations governing the design, construction, and installation of airport signs.

These Signage Standards eventually will become one volume in a series of coordinated and consistent documents known as the Airport Comprehensive Design Manual. This manual will include all STIA comprehensive design guidelines, standards by discipline, and regulatory and project process requirements. Each of the documents will be "living documents" which will be updated periodically over time. The Airport Comprehensive Design Manual will incorporate information needed for the many types of projects that occur at the airport thereby serving as a tool for Port staff, consultants, and tenants. This manual will also be a resource for information related to the maintenance of airport facilities.
