

JOBS

for a
greener
&
cleaner

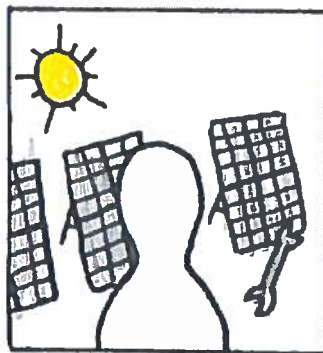

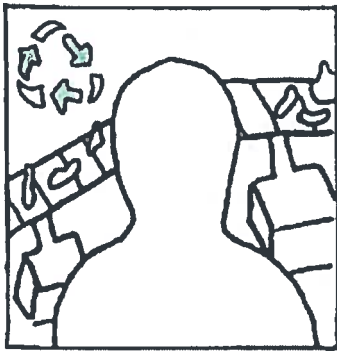

FUTURE

Port [®]
of Seattle

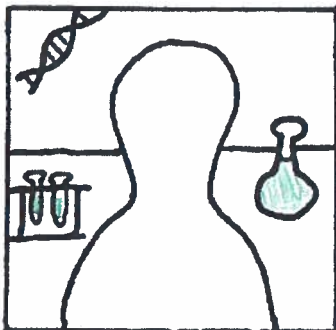

Our planet is beautiful,
but it is in danger.

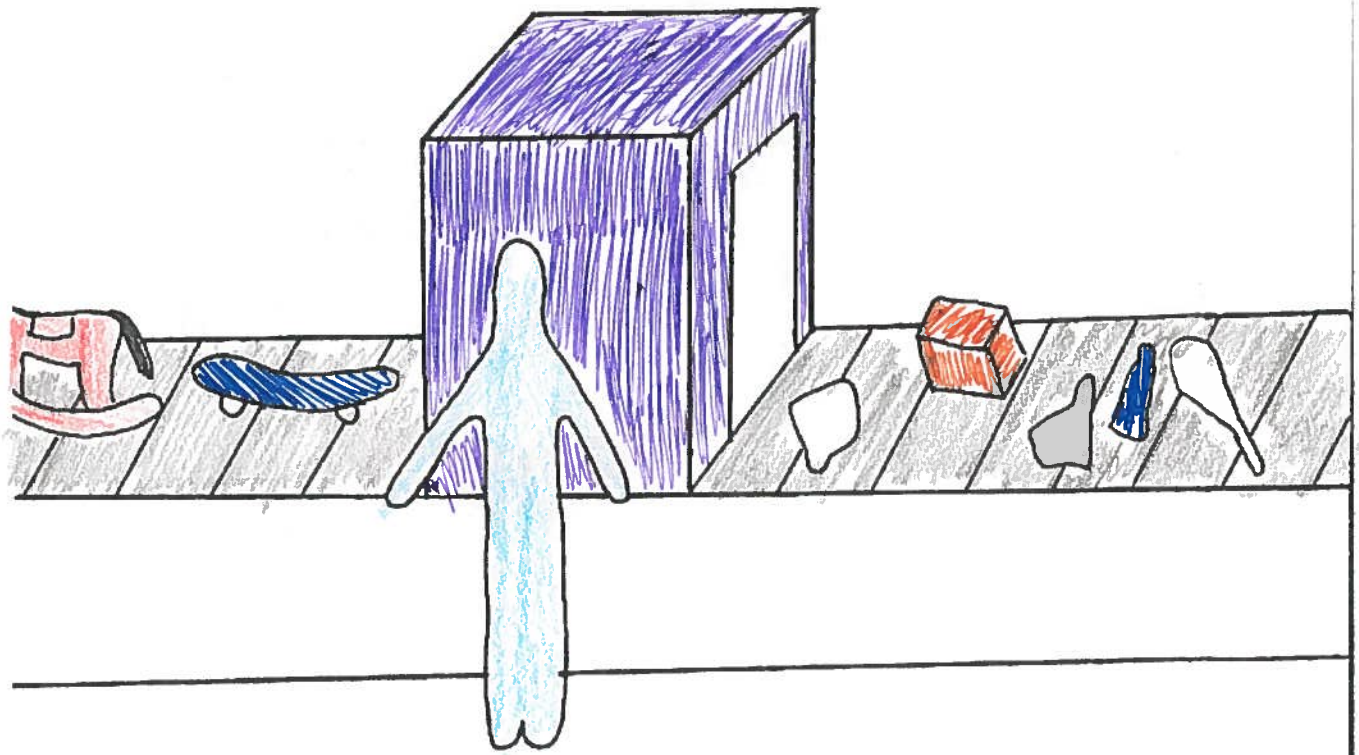

Many animals and plants are being
hurt by humans
but YOU can help!

Let's take a look at
some of the people
who are working to
SAVE OUR PLANET
and see how you
can join them!

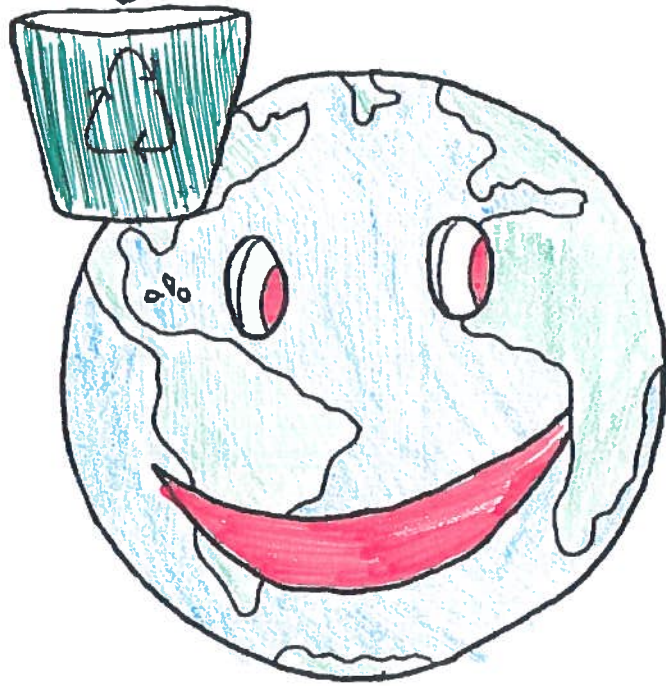

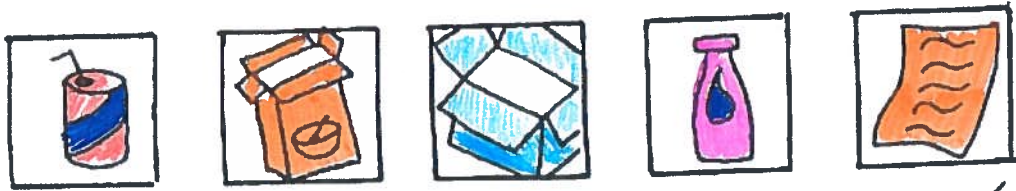

Diego is a
RECYCLING
COORDINATOR

He works in a recycling facility,
where he turns old trash into new stuff
so that less has to be
taken from our planet.

Recycling helps us use more
of the materials we have

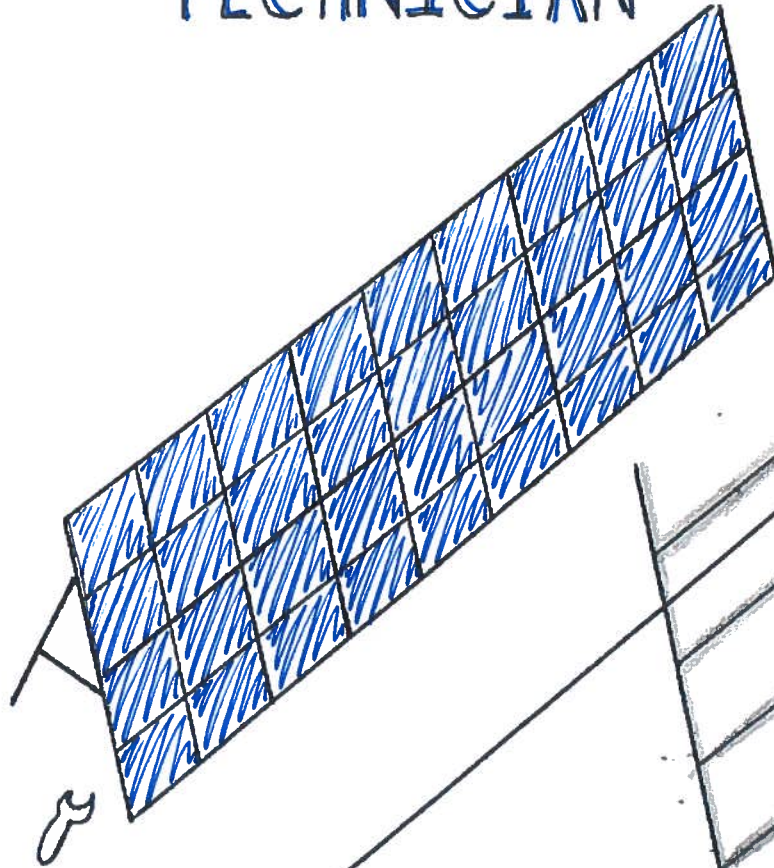

This means less goes into landfills
which leads to a healthier planet.

Most recycling coordinators have a college degree in environmental planning,

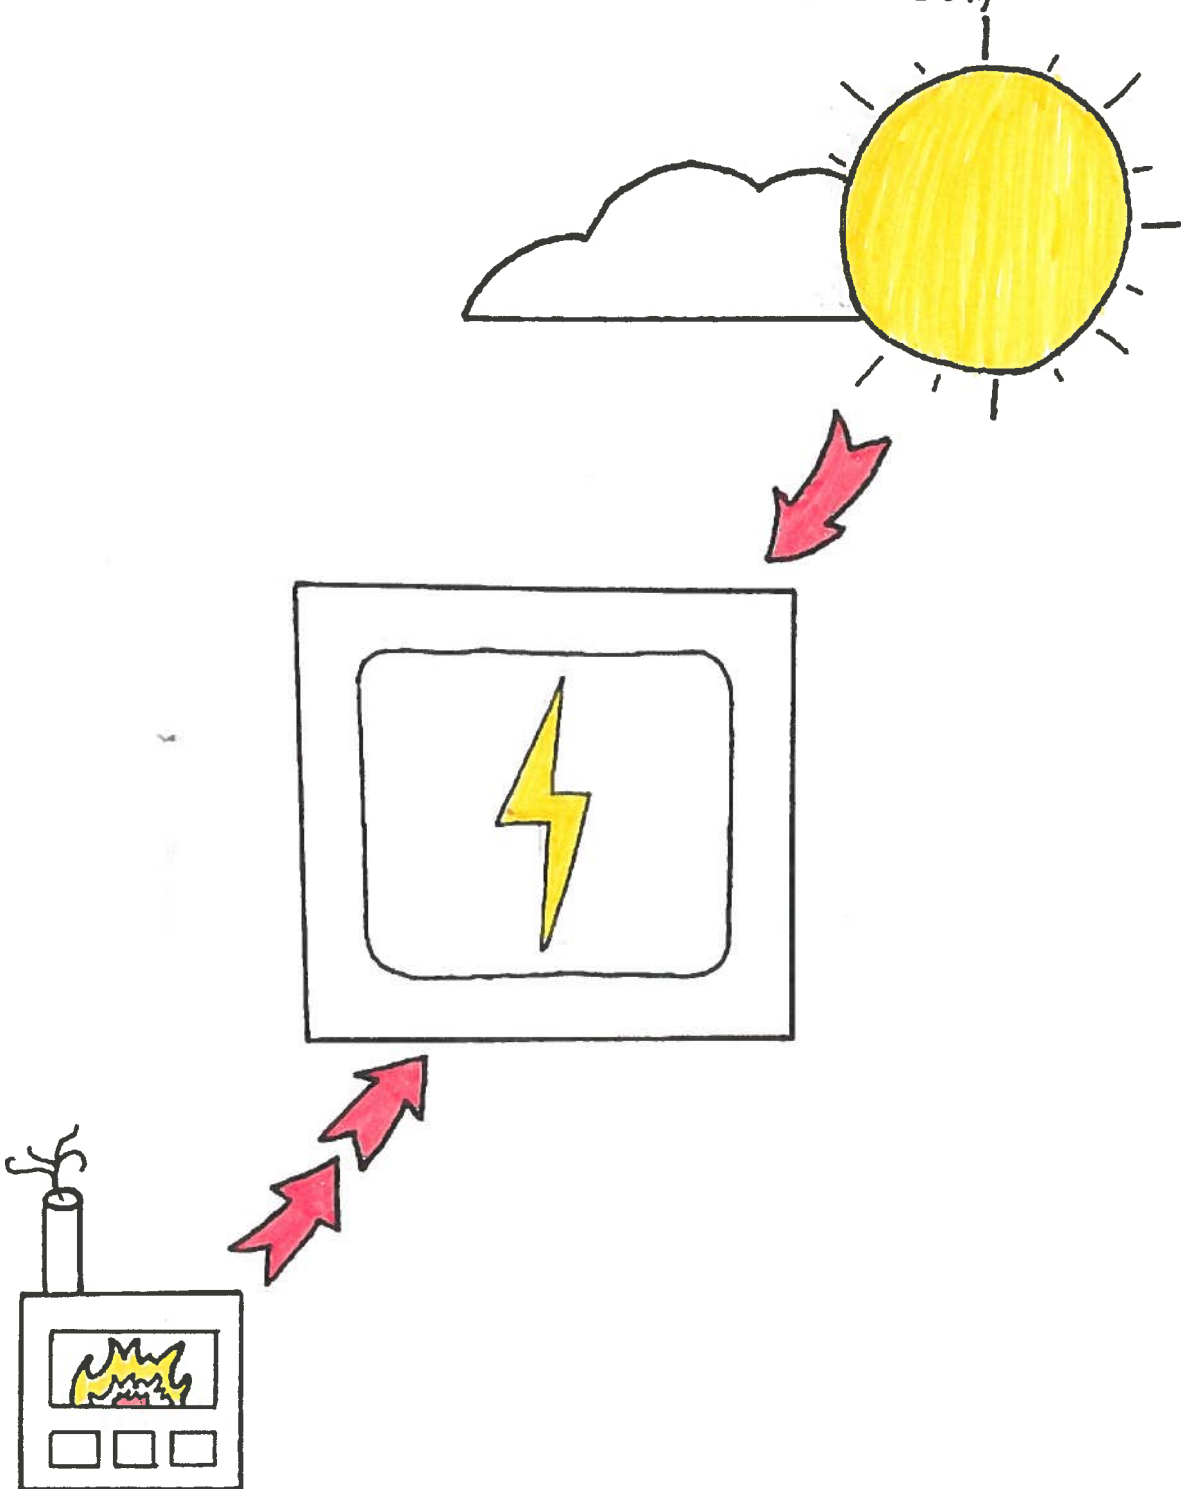

but you can start helping now by
REUSING AND RECYCLING
at home and school.

Rebecca is a
SOLAR
TECHNICIAN

She works outside,
where she puts solar panels
on roofs to help power our homes

Solar power uses the sun
instead of oil and coal,

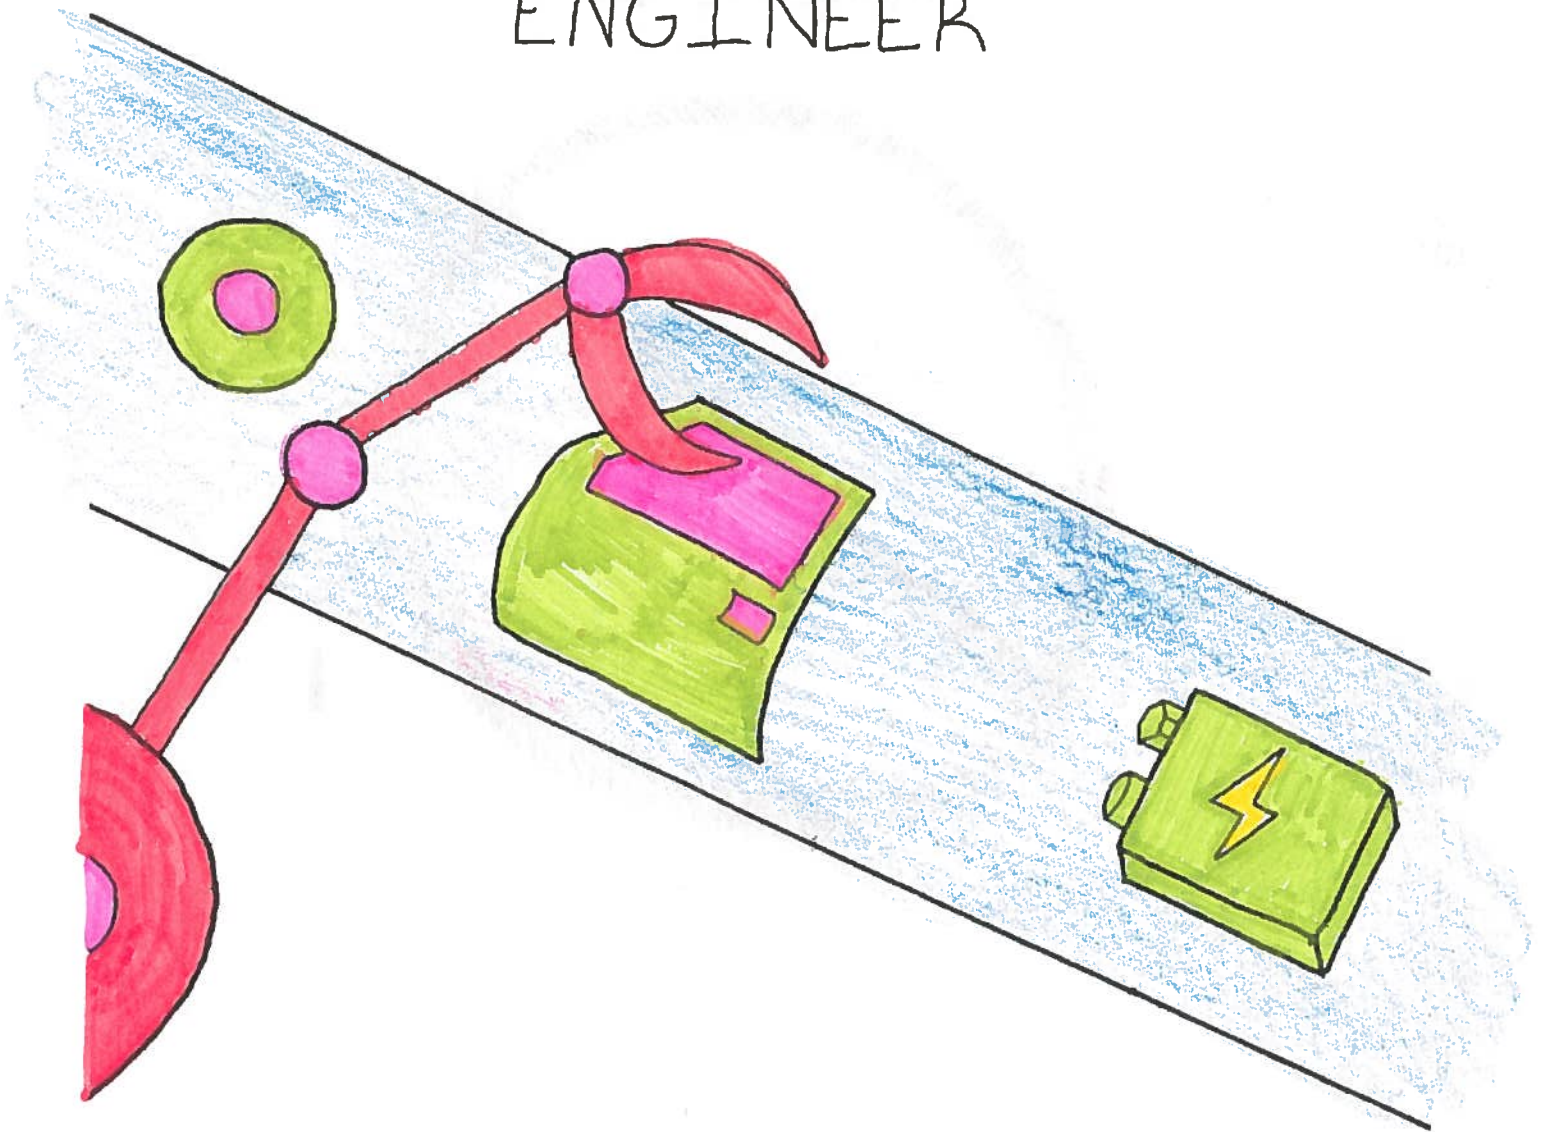

which helps to keep our air
CLEAN

To become a solar technician,

you just need a high school
DIPLOMA
and on-the-job
TRAINING

Ichiro is an
ELECTRIC CAR
ENGINEER

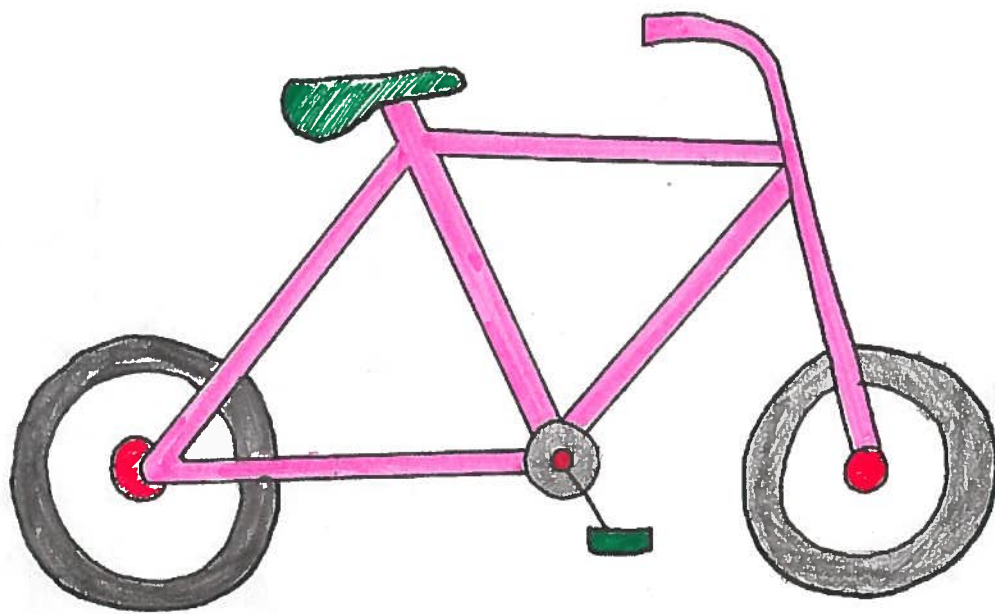

He works in a manufacturing
company where he repairs and
builds electrical cars

Electric cars don't need oil
unlike normal cars,
so we don't have to take resources
from the planet to drive them

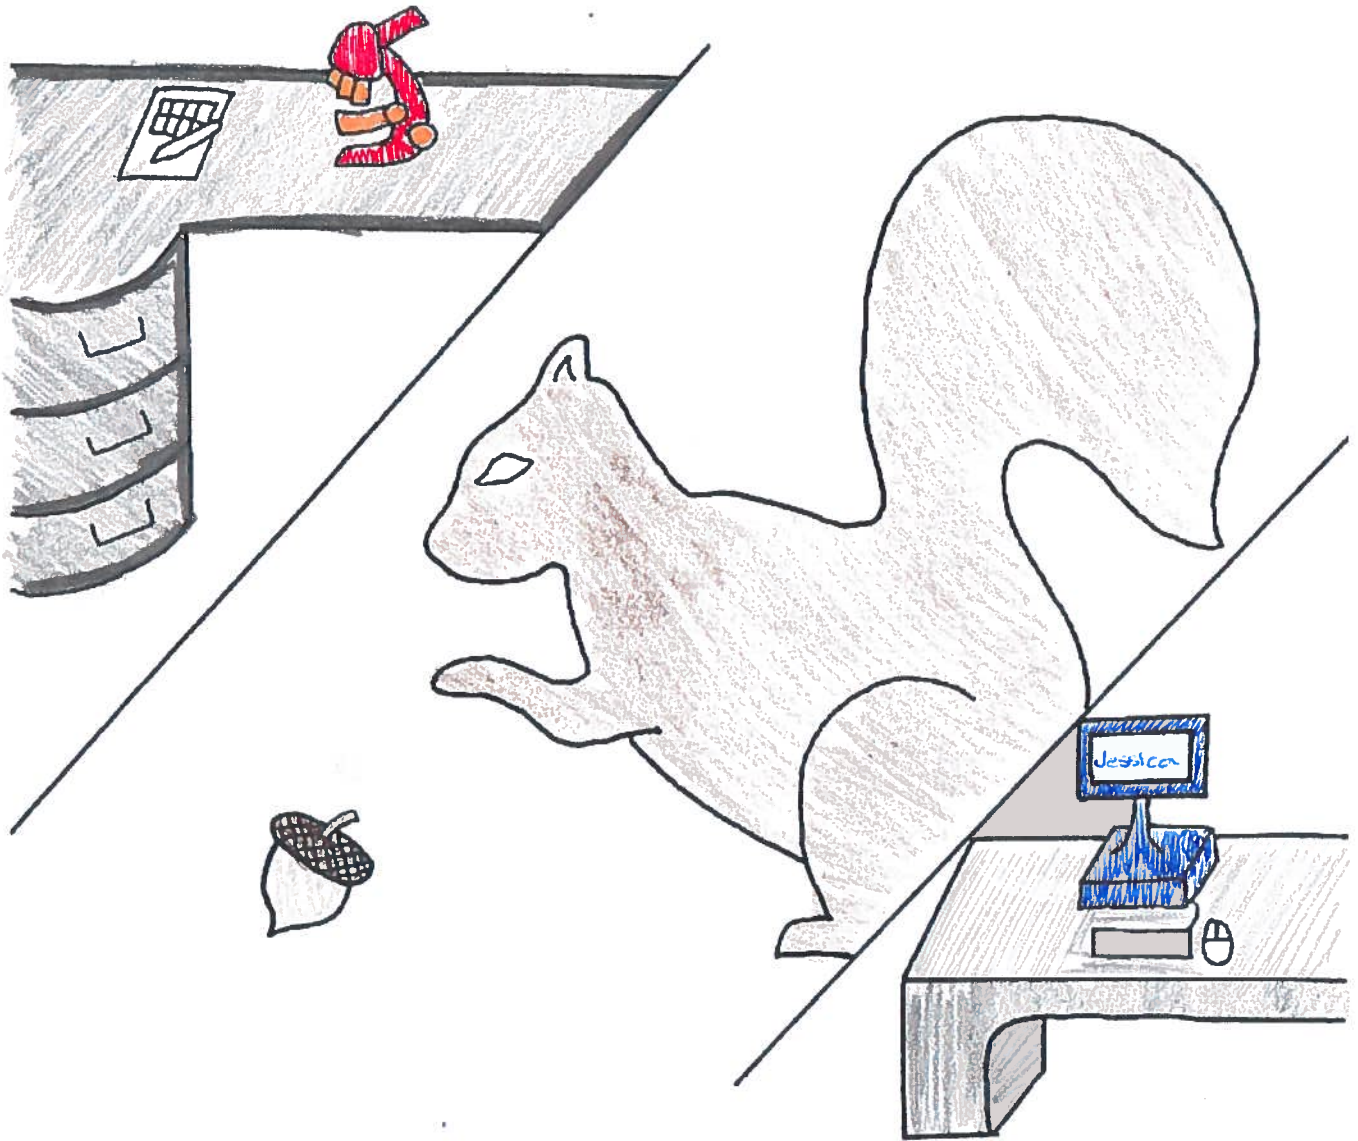

and they don't
fill the air
with smog that is bad
for us to breathe

Electric car engineers
typically get a college degree in
ELECTRICAL ENGINEERING
or go to trade school

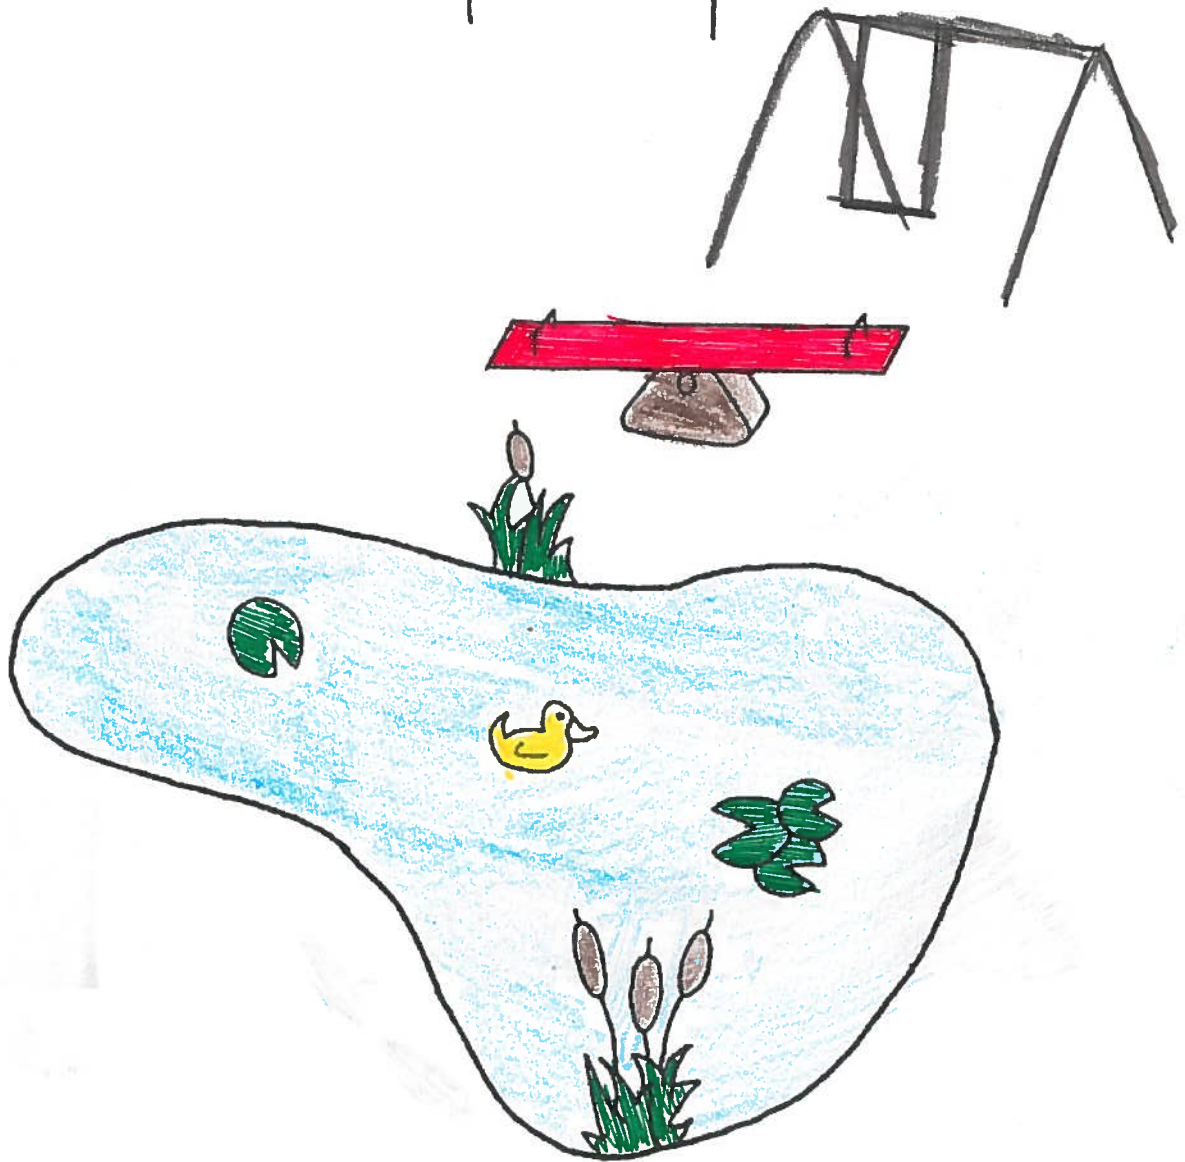

but you can help by
WALKING or **BIKING**
instead of driving

Seiko is an ENVIRONMENTAL RESTORATION PLANNER

She works everywhere:
in the lab, outside, and in an office.

She helps the planet

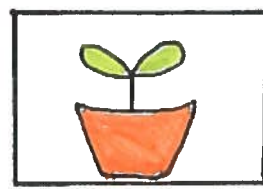

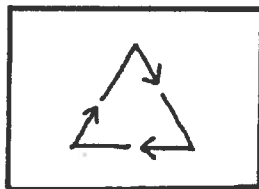

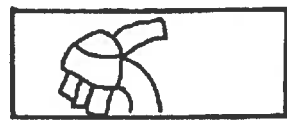

by saving plants and animals
which helps keep
outside places beautiful
so we can have fun at them

ENVIRONMENTAL RESTORATION PLANNERS

typically have a college degree in
environmental science

but you can start by planting
a tree or some flowers
