2022 Noise Monitoring Data Maintenance Issue Log

Date	Latest Status	Noise Monitor	Description	Latest Action	Loss of Data (if applicable)
2/11/2022	Completed	SEA - SEA18	The noise data from this site was not completely downloaded today.	The data is now available after being manually downloaded and processed successfully.	
2/8/2022	Open	SEA - SEA06	The noise data from this site was not completely downloaded today.	Appears microphone mast and equipment box were hit by a vehicle. Major damage to structure and equipment in box, noise monitoring equipment removed from equipment box for repair/evaluation.	Noise monitoring equipment sent to vendor.
2/1/2022	Completed	SEA - SEA14	The noise data from this site was not completely downloaded today.	The data is now available after being manually downloaded and processed successfully.	
1/13/2022	Completed	SEA - SEA14	The noise data from this site was not completely downloaded today.	The data is now available after being manually downloaded and processed successfully.	
1/2/2022	Completed	A003	Requested SEA A003 noise data to be manually downloaded. Due to no aircraft noise events recorded after 16:32 but there were flights after this time over Vashon based upon flights pulled for a flight track map.	Note from Port Staff: We had snow during this time, perhaps the homeowner near A003 had some snow removal equipment. Looking at the LEQ report the community noise was much higher than the aircraft noise. Closing ticket.
