Comment Breakdown — Day and Time

Operations vs. Comments — By Time of Day

This view overlays hourly noise comments (bars, left axis) on hourly airport operations (line, right axis) so the two can be compared across the day. The two series are shown on separate axes because their scales differ greatly — 40,151 operations vs. 8,445 comments for the month. Operations figures are actual SEA runway counts for June 2026, summed by hour across the month.

Comments by Runway Flow

Sea-Tac alternates between two runway-flow configurations depending on wind: NORTH flow (aircraft land and depart to the north on runways 34R/34C/34L) and SOUTH flow (to the south on 16L/16C/16R). Each runway operation is classified by flow, the prevailing flow is determined for every hour of the month, and each noise comment is attributed to the flow in use when it was filed. In June 2026, South flow was in use 57% of the hours but generated 78% of the comments — about 16.3 comments per flow-hour vs. 5.9 for North flow (2.8× as many).

Share of Operating Hours vs. Share of Noise Comments, by Runway Flow

RUNWAY FLOW	OPERATING HOURS	NOISE COMMENTS	COMMENTS / FLOW-HOUR
South (16L / 16C / 16R)	406 (57%)	6,604 (78%)	16.3
North (34R / 34C / 34L)	310 (43%)	1,841 (22%)	5.9
Totals	716	8,445	11.8
